

JOHN R. SIMMONS SCHOLARSHIP

CAMERON L. BROCK
BIOLOGY, SENIOR

A few things about me:

I am a sophomore majoring in Biology here at Utah State University; I plan on using this degree to pursue a career in medicine with interests in emergency medicine and pediatric oncology. My interest in biology and medicine began with a cancer diagnosis in my adolescence. I quickly found a passion for the human body and desire to use my unique experiences to help others in similar circumstances. As a member of the Randy Lewis Lab where I currently work on synthetic spider silk protein production in *E.Coli* and transgenic alfalfa. I pride myself on being a true-blooded Aggie. I am often seen on the front row at football and basketball games and love to be involved. I currently serve as vice president of the Pre-Med club, survivorship chair for Colleges Against Cancer, and a HURD committee member. An active volunteer for the Make-A-Wish foundation for the past five years, I brought this passion to USU and founded a Make-A-Wish club here on campus last October. I hope that other students can feel the same joy that I have felt during my time with the organization and also that we may help children here in Cache Valley.
