

## *James Mohr Scholarship*

### **Daisha Cummins**

Biology & Exercise Science, Junior

A few things about me:

My name is Daisha Cummins, and I was born and raised in Arco, Idaho. I decided to attend Utah State University after being selected as a USU Undergraduate Research Fellow. I will graduate in the spring of 2016 with departmental honors as an Undergraduate Research Scholar with a dual major in Biology and Human Movement Science and minors in Public Health and Chemistry. I'm looking forward to applying to medical school this summer. My hope is to get accepted to medical school and pursue a career in rural medicine. I currently work in the Sensory Motor Behavior Lab under the direction of Dr. Breanna Studenka, where I have participated in numerous projects involving timing, Autism Spectrum Disorder, and movement disorders. I have presented my research at various research events across the Utah State University campus and at the Utah Conference on Undergraduate Research (UCUR). In the following months, I will also present at the National Conference on Undergraduate Research (NCUR) in Cheney, Washington and at the North American Society for the Psychology of Sport and Physical Activity (NASPSPA) 2015 Conference in Portland, Oregon. Throughout college, I have worked as a Resident Assistant for USU Housing, served as an Undergraduate Teaching Fellow for Human Physiology, and volunteered many hours with various community organizations. I have a love for the outdoors, spending time with family, and attending all Aggie sports games.
